

Equalization payment

The equalization payment shows the dollar gap between the property division so far and the desired property division.

It represents the incremental amount of property one party would have to give the other to reach the desired property division.

Current property division:

\$ 86,263 Lisa's assets so far.
\$ 97,782 Michael's assets so far.

Desired property division:

Please enter the target % of property you wish Lisa to have.

Results: (click here for a narrative explanation):

From: Michael **To:** Lisa

\$ 14,962 Equalization payment amount.

\$ 101,225 After equalization payment, this is the value of Lisa's assets
\$ 82,820 After equalization payment, this is the value of Michael's assets.

The pie chart below shows the payer's property *after* the equalization payment, the recipient's property *before* the equalization payment and the payment itself.

If the equalization payment is made, that equalization payment then becomes part of the recipient's property.
